Detailed Clinical Parameters Summary

Parameter	Value	Reference Range	Parameter	Value	Reference Range
LH Level	8.2 mIU/mL	1.0 - 12.0	FSH Level	4.1 mIU/mL	1.0 - 9.0
AMH	6.5 ng/mL	1.5 - 4.5	Testosterone	85.5 ng/dL	15 - 70
Left Follicles	11	< 10	Right Follicles	13	< 10
Cycle Length	6.0 days	21 - 35 days	Symptom Score	0.7	0.2 - 0.5 (Low)

AI Clinical Synthesis & Lifestyle Note

Assessment Summary: Hello Jane Doe, your risk screening results indicate biochemical and physical parameters closely aligned with PCOS. Elevated indicators include an ovarian follicle count of 24 and a luteinizing hormone ratio of 2.0, suggesting typical hyperandrogenic and polycystic ovarian features.

Lifestyle Recommendations: We recommend scheduling a formal consultation with a gynecologist or endocrinologist. To support hormone regulation, focus on insulin-sensitizing lifestyle adjustments: implement a low-glycemic index whole-food diet, integrate consistent resistance training, maintain good sleep hygiene, and discuss options like inositol supplementation with your physician.
